LITTLE EMBER | XHZ

WHITEPAPER

V1.0 / NOV 2026

A SPARK OF OUR OWN.

BNB CHAIN / PROPOSED FLAP LAUNCH

Born from Fire.
United by Belief.

A community-led token project built around transparent rules, responsible participation and long-term collective effort.

FROM LITTLE EMBER TO A WILDFIRE

PRE-LAUNCH / SUBJECT TO VERIFICATION

01 / WHITEPAPER

The conviction behind XHZ

One spark can start a movement when its community chooses to build with purpose.

OUR PURPOSE

Take ownership of the journey.

Little Ember (XHZ) is conceived as a community-centered Web3 token initiative on BNB Chain. It seeks to replace short-term noise with informed participation, visible decisions and accountable stewardship.

THREE FOUNDATIONAL PRINCIPLES

01

TRANSPARENCY

Publish verifiable facts, mechanisms, treasury activity and material decisions.

02

COMMUNITY

Measure progress by genuine contributions, not manufactured volume.

03

LONGEVITY

Favor measured milestones and durable infrastructure over price promises.

OUR PRINCIPLE, NOT A RETURN

XHZ does not promise profits, guaranteed liquidity, exchange listings or protection from loss. Participation is voluntary and should follow independent judgment.

“A movement earns trust through what it does on-chain.”

02 / WHITEPAPER

Token overview

A clear identity and a launch path that can be independently verified.

TOKEN	NETWORK
XHZ	BNB CHAIN

MAX SUPPLY	LAUNCH ROUTE
1,000,000,000	FLAP / PLANNED

A PROPOSED BONDING-CURVE JOURNEY

01

LAUNCH ON FLAP

Token creation and initial trading through the selected launch contract.

02

PRICE DISCOVERY

On-curve trading changes reserves and price according to the contract.

03

POTENTIAL MIGRATION

If the protocol threshold is reached, funds and tokens may seed DEX liquidity.

IMPORTANT LAUNCH NOTE

The final implementation, trading rules, contract address, tax settings and any migration must be confirmed using the deployed contract and verifiable on-chain records.

03 / WHITEPAPER

Proposed trade-tax design

Planned buy tax: 3% • Planned sell tax: 3% • Final on-chain behavior takes precedence.

BUY TAX

3%

SELL TAX

3%

ALLOCATION OF COLLECTED PROJECT TAX

50% — **AUTOMATED LIQUIDITY**
Planned accumulation and provision to support available pool depth.

30% — **COMMUNITY & OPERATIONS**
Treasury funding for project operations and community initiatives.

10% — **TOKEN BURN**
A planned supply-reduction route that must be verified on-chain.

10% — **HOLDER REWARDS**
A proposed BNB-based reward pool for eligible token holders.

Illustration only: on $10,000 of eligible trading volume, a 3% project tax equals $300 before protocol fees, network costs, conversion costs and price impact. Actual collection and distribution depend on deployed contracts.

04 / WHITEPAPER

Built by participation

Community is an operating principle, not a promise of price appreciation.

PARTICIPATION FRAMEWORK

Community members can contribute through education, responsible discussion, multilingual communication, project feedback and transparent reporting. Participation is voluntary; no activity should require promoting purchases.

OPEN COMMUNICATION

Share project notices, contract links and changes through official identified channels.

PUBLIC TRACKING

Provide verified contract, transaction history and treasury movement links.

CLEAR ACCOUNTABILITY

Document roles, planned spending and reward eligibility before distributions.

RESPONSIBLE ACTIVITY

Reject wash trading, fabricated volume, misleading claims and coordinated manipulation.

TREASURY CONCEPT

The proposed 30% community-and-operations tax share calls for public wallet disclosure, spending controls, periodic reporting and independent reconciliation.

05 / WHITEPAPER

Roadmap & milestones

These phases are proposed workstreams, not guaranteed dates or exchange-listing commitments.

01

FOUNDATION

Finalize branding, public communication, community channels and guidelines.

02

LAUNCH READINESS

Confirm launch mode, token tax settings, wallet policy, contract verification and risk notices.

03

COMMUNITY GROWTH

Develop education, transparent reporting, responsible partnerships and genuine participation.

04

LONG-TERM DEVELOPMENT

Review liquidity health, governance practices, technical integrations and community feedback.

MILESTONE DISCIPLINE

Progress should be assessed using published evidence, not assumed timelines or price targets.

06 / WHITEPAPER

Verify before trusting

Transparency is demonstrated through evidence and ongoing responsibility.

01

CONTRACT & PERMISSIONS

Publish the final contract address, verified source code and any owner or administrator abilities.

02

POOL & LIQUIDITY

Disclose actual liquidity arrangements, access rights, locking and any migration events.

03

REWARD MECHANICS

Disclose holder eligibility, rewarded asset, timing, thresholds and exceptions.

04

TREASURY REPORTING

Identify official treasury wallets and periodically publish income and expense transactions.

Statements such as “ownership renounced,” “liquidity locked,” “burn automated,” or “BNB dividends live” should only be made after deployed contracts and transaction records prove them.

07 / WHITEPAPER

Risks, sources & links

Read this section before interacting with any token or external application.

RISK DISCLOSURE

Digital tokens can undergo rapid price moves, low liquidity, slippage, smart-contract vulnerabilities, operational failure, phishing and even complete loss of value. Trade taxes can create extra friction or wallet compatibility problems. This document is informational, not investment advice, a solicitation or a promise of returns.
